

Fifty Firsts Wellness – SHOP Specification

1. Core Shop Features Overview

| Feature | Description / Business Logic | Frontend Tasks | Backend Tasks |
|---|--|---|---|
| Product Listing Cards | Each product appears as a card showing image, name, price, and CTA buttons (Pre-Order / Add to Cart). | Display product grid with filters (category, availability). Add Pre-order and Notification icons. | API endpoint to fetch all products with attributes: <code>id, name, price, stock, preorder_count, discount, reviews, image_url, category</code> . |
| Pre-Order Functionality | Users can “Pre-Order” an item not yet available. The system tracks total pre-orders per product. | “Pre-order” button visible when <code>product.status = 'coming_soon'</code> . Update state in UI after click. | Endpoint: <code>/api/products/preorder</code> → Records user_id, product_id, timestamp. Update <code>preorder_count</code> . Return new preorder total. |
| Out-of-Stock Notification (Bell Icon) | When a product's stock = 0, bell icon appears. Users can opt to be notified when item restocks. | Display bell icon conditionally. On click → trigger “notify me when available” modal. | Endpoint: <code>/api/products/notify-me</code> → stores user_id + product_id. On stock update > 0, auto-trigger Maileroo API to email users. |
| Dashboard Tracking (User Activity) | Users can view all marketplace interactions (preorders, notifications, purchases) in dashboard. | Add new “Marketplace” tab in user dashboard. Display lists of user preorders, waitlist items, and orders. | API endpoints: <code>/api/users/{id}/marketplace-activity</code> returns preorders, notifications, purchases. Data persisted in <code>user_activity</code> table. |
| Royal Mail Address Verification + Delivery Tracking | During checkout, users must enter a verified UK address using Royal Mail API. Delivery tracking also linked. | Checkout form uses address autocomplete from Royal Mail API. Show tracking ID in user dashboard after purchase. | Integrate Royal Mail API: validate address before order submission, create shipping entry with <code>tracking_id</code> . Endpoint: <code>/api/orders/shipping</code> . |
| Shopping Cart Page | Dedicated cart page accessible from top-right cart icon. (Refer to Abiola's Figma design). | Cart icon redirects to <code>/cart</code> page. Display item summary, quantity, subtotal, discount if active. | Maintain user cart in DB or session. <code>/api/cart</code> for CRUD operations. Support persistent carts (tied to user_id). |
| Discounts & Promotions | Admin can set global or product-specific discounts. | Display discounted price dynamically if discount active. | Admin portal field <code>discount_percentage</code> per product. On save, backend recalculates <code>discounted_price</code> . |
| Product Reviews | Users can submit and view reviews per product. Admin can manage and filter reviews. | Review form (rating, comment). Display reviews list. | <code>/api/products/{id}/reviews</code> GET/POST/DELETE. Admin dashboard shows moderation view with filters by date, rating, keyword. |
| User Deletion & Data Retention | Admin can permanently delete test or inactive users. | Admin UI: “Delete User” action (confirmation modal). | Implement soft delete (<code>is_active=false</code>) and hard delete option. Retain purchase history in soft-delete mode for reactivation. |
| User Reactivation & Data Persistence | If user is reactivated, all history remains intact. | On reactivation, frontend re-fetches all previous data from DB. | Keep user-related records in linked tables (<code>user_id</code> foreign key). Ensure soft delete only affects authentication layer, not data tables. |

2. Database Schema (Simplified Overview)

| Table Name | Key Fields | Notes |
|----------------------------|---|--|
| <code>products</code> | <code>id</code> , <code>name</code> , <code>price</code> , <code>discount</code> , <code>stock</code> , <code>status</code> , <code>image_url</code> , <code>preorder_count</code> , <code>category_id</code> | Stores all product metadata. |
| <code>preorders</code> | <code>id</code> , <code>user_id</code> , <code>product_id</code> , <code>timestamp</code> | Tracks all preorders per user and product. |
| <code>notifications</code> | <code>id</code> , <code>user_id</code> , <code>product_id</code> , <code>type</code> (<code>'restock'</code> , <code>'new_product'</code>), <code>is_sent</code> | Tracks which users should be emailed upon restock. |
| <code>user_activity</code> | <code>id</code> , <code>user_id</code> , <code>action</code> , <code>product_id</code> , <code>timestamp</code> | Logs all marketplace actions for user dashboards. |
| <code>reviews</code> | <code>id</code> , <code>user_id</code> , <code>product_id</code> , <code>rating</code> , <code>comment</code> , <code>created_at</code> , <code>is_visible</code> | Product review system. |
| <code>orders</code> | <code>id</code> , <code>user_id</code> , <code>product_id</code> , <code>quantity</code> , <code>total_price</code> , <code>status</code> , <code>tracking_id</code> , <code>address_id</code> | Handles order and tracking. |
| <code>addresses</code> | <code>id</code> , <code>user_id</code> , <code>address_line1</code> , <code>city</code> , <code>postcode</code> , <code>royal_mail_verified</code> | Linked to Royal Mail API validation. |
| <code>discounts</code> | <code>id</code> , <code>product_id</code> , <code>percentage</code> , <code>is_active</code> , <code>start_date</code> , <code>end_date</code> | For promotions. |

3. Implementation Plan (Step-by-Step)

| Phase | Task Group | Responsible | Details / Tools |
|--------------------------------------|--|--------------------|---|
| 1. Setup & Planning | Confirm DB schema and API routes | Backend | Finalize endpoints, define relationships, and integrate ORM (Prisma / Sequelize). |
| 2. Product Listing & Preorders | Build core product grid & preorder logic | Frontend + Backend | Backend: <code>/api/products</code> , <code>/api/preorders</code> . Frontend: React/Vue grid, add Preorder button states. |
| 3. Notifications System | Integrate Maileroo for restock alerts | Backend | On product stock update → trigger email batch to users in <code>notifications</code> . |
| 4. Dashboard Integration | Link user marketplace actions to dashboard | Frontend + Backend | Create dashboard API endpoint to retrieve marketplace activity. |
| 5. Checkout & Royal Mail Integration | Integrate address validation and shipping tracking | Backend | Use Royal Mail API for UK addresses. Store verified addresses. |
| 6. Cart Page Implementation | Follow Abiola's design | Frontend | Cart page with editable quantities, discount line, total, checkout button. |
| 7. Discounts & Admin Controls | Add discount management to Admin Dashboard | Frontend + Backend | Backend: <code>/api/admin/discounts</code> . Frontend: Admin form + dynamic price updates. |
| 8. Reviews & Moderation | Build review system | Frontend + Backend | Backend: <code>/api/products/{id}/reviews</code> . Frontend: star ratings + comment UI. |

| | | | |
|---|--------------------------------|-----------|--|
| 9. Data Deletion & User Reactivation | Clean up admin data management | Backend | Implement soft delete and reactivation logic. |
| 10. Testing & QA | End-to-end flow tests | Full Team | Test preorder, notification, checkout, discount, and reactivation flows. |

4. Additional Notes

- Maileroo API will handle **email notifications** for restocks and preorders.
- Royal Mail API is only triggered during checkout; validated addresses are cached for returning users.
- Admin dashboard will require a **new section: "Product Management"** to toggle stock, set discounts, and review preorders.
- User dashboard will gain a "**Marketplace**" sub-section that consolidates all marketplace-related user activities.
